

This project <https://github.com/develone/uSDR-pico.git> -b test-dev was the starting point for https://github.com/develone/Arduino_uSDX_Pico_FFT_Proj.git. I decided to use this one <https://github.com/develone/uSDR-pico.git> -b test-dev instead https://github.com/develone/Arduino_uSDX_Pico_FFT_Proj.git, since it used the Arduino IDE.

I forked <https://github.com/ArjanteMarvelde/uSDR-pico>
I created a new branch test-dev

Initial tests on a ovhcloud vps and windows 11 WSL
uSDK-pico/doc/uSDK-pico/doc/notes-vps-a35f6ef-build-test.txt
notes-WSL-build-test.txt
Initial testing following these 2 builds
uSDK-pico/doc/testing-uSDR-Pico.txt

[devel@pi5-70](#):~/master-repos/ \$ git clone git@github.com:develone/uSDR-pico.git -b test-dev

[devel@pi5-70](#):~ \$ cd pico

[devel@pi5-70](#):~ \$ git clone https://github.com/develone/uSDR-pico.git -b test-dev

These variables are set by ./bashrc

PICTOOL_FETCH_FROM_GITHUB=/home/devel/pico2/BUILT_PICOTOOL
PICO_EXTRAS_PATH=/home/devel/pico-extras
PICO_SDK_PATH=/home/devel/pico2/pico-sdk

Top level CMakeLists.txt requires modifications.

```
devel@pi5-70:~/pico/uSDR-pico $ git diff CMakeLists.txt
diff --git a/CMakeLists.txt b/CMakeLists.txt
index 1f045f5..c23e563 100644
